

**LIGHT RAIL TESTING AND COMMISSIONING  
MITCHELL TO DICKSON  
FROM 10 SEPTEMBER 2018**

Canberra's Light Rail Stage 1 Project is now ready for pre-operational testing and commissioning of both light rail track and vehicles. This important phase of the project ensures the system is fully functional and safe to carry passengers.

**What To Expect:**

Initially, most testing will be undertaken at night to protect workers who are finalising day time remaining construction works such as landscaping and building the light rail stations.

Light rail vehicle activity along the **Mitchell through to Dickson rail segment** will start from **mid-September**. Initial operating times will be between **8pm and 4:30am each night**. Generally, there will be **no testing on weekends**.

**Traffic Management and Detours:**

Initial testing will involve the presence of traffic management staff at intersections through which light vehicles will pass. Traffic management staff and signs will be highly visible on site.

**Additional Information:**

Typically, light vehicles and light towers are the only resources required in support of light rail vehicle testing and commissioning.

Due to the nature of the operation, some of the activity will be noisy. The project team will limit these impacts wherever possible.

*Thank you for your patience during these important works.*
